- 5** Our experience with excellent and reliable clientele, allow us to provide key projects with quality products.

ALUMINUM COMPOSITE PANELS

Aluminum Composite Panels are available for both exterior and interior applications, and have been used in exterior architectural applications such as building fascia, storefront entryways, curtain walls, cladding service station canopies and column covers.

Aluminum Composite Panels is the ideal choice for signage, store fixture, food service merchandisers, kiosks, point-of-purchase displays, trade show exhibits and fascia systems.

Ease of Maintenance

Aluminum Composite Panels retain remarkable strength and flatness, rigidity and stability under climate changing conditions, also durability and ease of maintenance.

Aluminum Composite Panels is the perfect system for building cladding.

Aluminum Composite Panels speeds construction times and cuts costs in labor and materials.

Aluminum Doors and Windows

ALUVIE offers a wide range of windows and doors products and services. We guarantee excellence, from your choice of slope sliding windows and glass French doors to arc curved glass and architect windows and doors. Our confidence in our product and service delivery systems from our

partnership with leading window and door manufacturers that not only guarantee superior quality products but also impressive handling and services. We have a reputation for quick turnaround and delivery times, enabling us to deliver your orders at the soonest time possible.

One Stop Solution

Windows

Slope sliding windows, sliding glass windows, frameless windows, frameless sliding windows, designer windows and doors, contractors windows and doors, architect windows and doors.

Doors

Pivot glass door, glass French doors, frameless sliding doors, exterior sliding doors, commercial door with window, bronze clad sliding French doors, entry door display.

ALUMINUM FOLDING DOORS

Aluvie produces aluminum folding doors that fit every need for our customers. Our aluminum folding doors are superior by design and we offer more choices in panel size, material and glass options than any other manufacturer.

Our aluminum folding doors can resist High Wind and coastal packages as well as standard climate options.

Superior by Design

Whether it's a residential or a commercial job, Aluvie folding door systems have higher load capacities, stronger panels, more glass and door options than any other competitor.

ALUMINUM KITCHENS

Our custom aluminum frame glass cabinet doors are a contemporary addition to residential and commercial interiors. Whether kitchen cabinet doors, office furniture doors or closet storage or furniture accents, aluminum frame doors are made to our customers' specifications and include all functional and decorative hardware boring.

Aluminum Kitchen cabinets maybe better than a laminated blanket hand grip, aluminium kitchen offers aluminum tambour doors in a gorgeous range of fresh light kitchen cabinets with dark counter tops colored lights for room inspiration.

Aluminum Cabinet Doors

The aluminum frames which come in a variety of finishes provide endless design possibilities when combined with our numerous glass and custom insert options. Our modern cabinet doors are ideal for both remodeling and new construction projects.

ALUMINUM LOUVERS

Aluminum Louvers are extruded aluminum that are designed to manage the impact of solar gain on commercial buildings. Architectural Aluminum Louvers are engineered for effortless installation on virtually any wall conditions, while providing a finished look to your building's design.

Built with sturdy, high-quality aluminum, Aluminum Louvers are constructed to drastically reduce energy consumption and reliance on traditional lighting and cooling methods.

Divide and Protect

Aluminum Louvered panels are great for a number of different applications, both architectural and industrial. From HVAC or garbage enclosures, to dividers on apartment building balconies or pergolas, these panels can provide a separation of space and add privacy without losing important light and air flow.

GLASS CURTAINS

Make the most of your space with retractable glass curtain walls. Imagine enjoying breakfast on your balcony without chilly winds, or hosting a dinner party outside with your friends even when it's raining. Our balcony enclosures can transform your unused balcony space into your favorite place in your home, all year round.

On windy, rainy, or cool days, keep the glass closed for a cozy and comfortable solarium with unobstructed views. Slide the retractable glass open easily for fresh air on those beautiful summer days.

Make the most of your space

You can now enjoy your space throughout the year. Our Curtain Glass is perfect for interior divisions, and for enclosing balconies, terraces and patios. The compressed panels provide the greatest security and weather tightness of folding doors or windows on the market today.

GLASS CURTAIN WALLS

Curtain wall systems are a non-structural cladding systems for the external walls of buildings. They are generally associated with large, multi-story buildings. Interior glazed systems allow for glass or opaque panel installation into the curtain wall openings from the interior of the building.

Exterior glazing systems work well for low rise construction projects that allow for easy access to the exterior of the building. Larger high-rise construction projects may require interior glazing.

Thermal Efficiency

Improving heat efficiency also depends on the use of selective glass coatings. High performance coatings can significantly increase insulation and improve comfort for a building's occupants.

FRAMELESS SEMI- FRAMELESS

Both insulated glass units and single layer glazing can be used in frame-less glazed constructions forming facades of buildings or specific fragments thereof. For this purpose, hardened glazing with special point-shape fastenings is used.

Glazing with point-shape fastenings with the help of special details – "spiders" is fastened to columns, building roofing's, walls or specially equipped metal structures. Seams between the glasses are filled with special sealant.

Advantages

Frameless glazed structures are the perfect secondary facade: they give excellent looks to the building, significantly reduce external noise level, improve micro-climate of the building.

GLASS BALUSTRADES

As a modern alternative to unattractive concrete or metal balcony balustrades, Aluvie can install stylish looking safety glass balustrades that will be the envy of your neighbors and also greatly enhance the appearance and of your property.

It is possible to have freestanding glass without any posts. This is done by using a base post system that can be clad with a finish material or completely hidden by finishes. It's the perfect solution for glass balustrades that show as little metal as possible.

A Magical Creation

Architects love how frame-less base post railings don't get in the way of the view from the interior and exterior. This is why it has become the optimum of what modern design is supposed to be like.

SKYLIGHTS INNOVATION

Skylights provide a solution for when window placement is limited or structurally impossible to create. Rooms surrounded by walls can get very good natural lighting and heat when skylights are installed. These products will also provide ventilation.

Install an energy-efficient skylight and you also get to enjoy reduced costs of heating, cooling, and lighting. Just like windows and doors, skylights need to be carefully selected.

Choose Skylight that:

- Have the right level of illumination and temperature.
- Are placed strategically to provide passive solar heating.
- Glazed to provide the best performance.
- Properly installed to minimize the cost of heating.
- Are designed easy to use and operate.

HOW TO REACH US

We provide a full solution from consultation to material sales.

We have executed even the most ambitious ideas.
